DETAILED ACTION

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

The Claimed, invention is directed to non-statutory subject matter.

Claim1 rejected under 35 U.S.C. 101 because the claimed invention is not supported by either a practical asserted utility or a well-established utility.

a) Disclosed invention is particularly, but not exclusively, applicable to image processing in which a data set constituting an image is convolved with a further data set (which may act as a filter) see field of the invention in specification.

b) Disclosed invention uses general-purpose computer system.

c) Step a in claim 1, is a mere arranging the elements of input data and further data into a set of groups.

D) Steps b-d in claim 1, are a sequence of mathematical operations for convolution; to combine the values of the data elements of the two data sets and map the results into an output data set, a process that consists solely of the manipulation of an abstract idea without any limitation to a practical application is non-statutory. Claimed invention as a whole is directed to solely an abstract idea (manipulation of data mathematically) and does not produce a useful result.

2. Claims 2-14 are rejected under 101 because they are depending from rejected claim 1.
